CEF eInvoicing Conformance Testing Service SOD

Document Approver(s):

Approver Name	Role
CORNEAU Caroline	CEF eInvoicing

Document Reviewers:

Reviewer Name	Role
DE BOER Christel	CEF eInvoicing
Caroline AEBY	CEF Support
Amar DEEP	CEF Support

Summary of Changes:

Version	Date	Created by	Short Description of Changes
0.06	24/08/2016	P. TAIMURAZOVA	Template review
0.07	25/08/2016	CEF Support	Apply comments and remarks
1.01	18/10/2016	Christel DE BOER	Added information to section 3
1.02	21/10/2016	Christel DE BOER	Comments by C. Simatos & N. LOOZEN
1.03	25/10/2016	Christel DE BOER	Email updated and changed drawings.
2.00	15/11/2016	Christel DE BOER	Final after review period
2.01	13/02/2016	CEF Support	Update Template
3.0	12/06/2017	ACHHAB Oussama	Review 2nd syntax added to testing
3.2	15/11/2017	Christel DE BOER	Added info received from Aymen Khalfaoui
3.3	06/12/2017	Caroline AEBY Chaouki BERRAH	SOD updated to align test cases + tech infra (AS testing related) to the EU norm.
3.4	08/12/2017	Chaouki BERRAH Caroline AEBY	Document structure streamlined. Preparation Screenshots included
3.5	13/12/2017	Chaouki BERRAH	Execution Screenshots include
3.6	15/12/2017	Chaouki BERRAH	Update after review
4.1	09/01/2018	Christel De Boer	Final version
4.2	12/02/2018	Chaouki BERRAH	Email and Offline tools options removed
4.3	12/04/2018	Caroline AEBY	Reuse policy notice added.
4.4	08/06/2018	Caroline AEBY	Template updated
4.5	25/09/2018	Caroline AEBY	No more Standby services
4.6	26/10/2018	Caroline AEBY	GITB links updated
4.7	18/12/2018	Denes VARSZEGI Caroline AEBY	"AS4_receive_*" test cases added to GITB.
4.8	21/12/2018	Christel DE BOER Agnieszka BAJNO	Updates and finalisation of the SOD.
4.9	10/10/2019	Caroline AEBY	Registration: extra parameter asked to user
5.0	28/11/2019	Denes VARSZEGI Caroline AEBY	New GITB platform
5.1	29/11/2019	Christel DE BOER	Typos's and format improvements.
5.2	15/01/2019	Denes VARSZEGI Caroline AEBY	New GITB platform
5.3	16/01/2019	Christel DE BOER	Typo's and format improvements

1. INTRODUCTION

This document describes the Conformance Testing service provided by the CEF eInvoicing Test Bed. It introduces the purpose of the service, its benefits, the related roles and responsibilities of all the stakeholders and the overall process.

1.1. Purpose of the service

CEF offers a test infrastructure that will allow Service Providers and Public Administrations to check the conformance of their existing eInvoicing solutions against the core invoice format of the [European standard on eInvoicing \(EN\)](#).

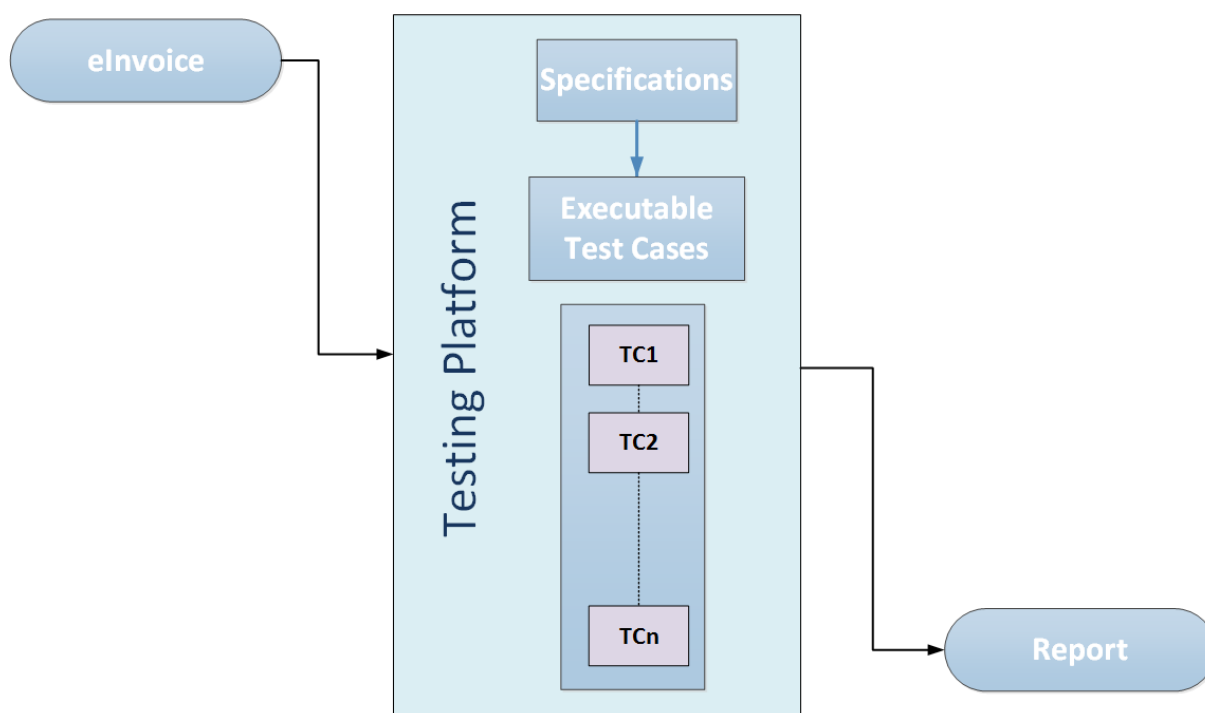

This SOD differentiates from its previous versions to align the conformance test cases to the core invoice of the EN and describes the updated technical infrastructure, more specific the eDelivery AS4 validations.

The goal of the CEF eInvoicing Conformance Testing service is to verify that an implementation based on the eInvoicing specification is indeed conformant to the specifications.

CEF eInvoicing provides ready to use test cases, a testing platform, and supports the users of the CEF eInvoicing Conformance Testing service during the entire testing process.

The overall approach to Conformance Testing is presented in the figure below:

The testing platform receives as input eInvoices produced by implementations of Service Providers or Public Administrations of the European standard on eInvoicing (EN).

These eInvoices are checked by the testing platform, to verify that they pass the European standard on eInvoicing (EN) specifications.

The testing platform can also send eInvoices to the implementations by Service Providers or Public Administrations of the European standard on eInvoicing (EN).

The outcome of the test execution is documented in the test report. If the test report shows that all the mandatory specifications have been passed as required, the eInvoice becomes conformant and a report is produced by the platform, which can be downloaded.

For eInvoicing Grants purposes, the user should contact INEA and ask for validation, after the successful test results. INEA then checks whether the recorded attempts and the provided evidence fulfil all of the requirements.

A list of key terminology related to Conformance Testing is defined in the table below.

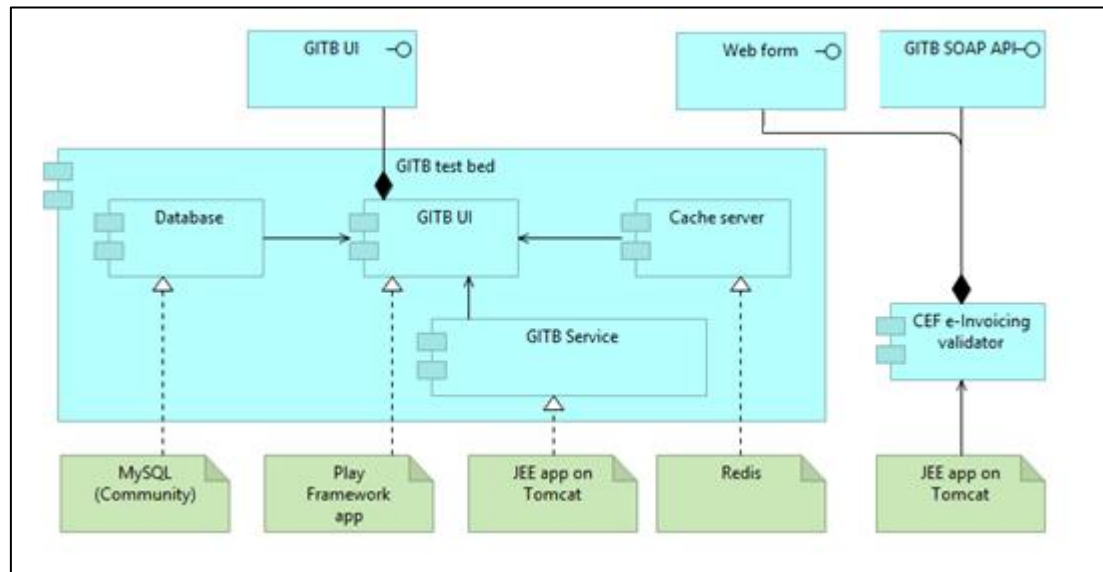

Terminology	Definition
Reference implementation	<p>Application component that serves the purpose of realising a service that is made available to systems under test (SUT) to perform interoperability tests against. It is termed a “reference implementation” because it typically provides an implementation of a specification that is assumed to be correct so that other implementations of the same specification (or just other instances of the reference software) can be tested against it. Note that in case no standard or specification is involved, the reference implementation is effectively a simulation of the service that is exposed for testing.</p> <p>Reference implementations can range from being fully independent IT systems to plug-in components.</p>
Testing platform	<p>Content validation: eInvoices are checked by the testing platform, to verify that they pass the European standard on eInvoicing (EN) specifications.</p> <p>Test report generation: production of a structured test report detailing the results of the test.</p> <p>eInvoices Sending: the testing platform sends eInvoices to the implementations of the European standard on eInvoicing (EN) by Service Providers or Public Administration.</p>

1.2. GITB test bed software

1.2.1. Description

- **Software and hardware** resources comprising a complete testing platform (see figure below)
- Purpose is to **make testing easier** (for systems and testers)
- **Conformance** testing (messages conform to specifications)
- Testing can use simulators or test-focused instances (e.g. reference implementations of standards)

- **GITB** is a CEN standardization initiative to produce test bed specifications and implementing software

1.2.2. Users

"Testing for electronic invoice exchange using the European Commission's CEF eInvoicing DSI is offered to its Service Provider/Public Administration across Member States to address invoice content validation. Invoices can currently be provided for automated validation by means of web form upload and (GITB-compliant) web service call, invoice delivery as AS2¹ and AS4² messages using the CEF eDelivery DSI."

The term "**User**" will be used in the remainder of this document to refer to any of these types of users.

1.2.3. Scope

The scope of the CEF eInvoicing Conformance Testing is:

- Explaining conformance testing and the platform used to perform it.
- Showing the different scenarios and examples on a provided platform.
- Production of a testing report

¹ AS2: <https://www.ietf.org/rfc/rfc4130.txt>

² AS4 profile of ebMS 3.0: <http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/profiles/AS4-profile/v1.0/os/AS4-profile-v1.0-os.pdf>

1.2.4. Benefits

The CEF eInvoicing Conformance Testing service has been designed to generate a list of benefits to the users of the service:

- Testing supported by professional staff of the European Commission.
- Quick testing cycle with reduced cost and time.
- Many testing processes on offer including web form upload, web service and eDelivery (using either AS2 or AS4 validations).
- Testing anywhere at any time.
- Tests are fully domain-neutral.

2. ROLES AND RESPONSIBILITIES

This section describes the main roles in the CEF eInvoicing Conformance Testing service and their responsibilities.

The following table summarises the split of roles and responsibilities between the different actors in the CEF eInvoicing Conformance Testing process in the form of a RACI³ matrix where:

- **Responsible (R):** indicates the entities that perform the process-step. Every process-step has at least one responsible entity. Responsibilities can also be shared.
- **Accountable (A):** indicates the entity that is ultimately accountable for the process-step. Every process-step has only one accountable entity.
- **Consulted (C):** indicates the entities that give feedback or are consulted during the process-step. This is a two-way process. Not every process-step has an entity that is being consulted.
- **Informed (I):** indicates the entities that needs to be informed on the results of the process-step. This is a one-way process. Not every process-step has an entity that is being informed.

The process is described in detail in §3 - How to use the service step by step.

Process/Service	Responsibility Entity
	Service Provider/Public Administration
Step 1: Registration	A/R
Step 2: Preparation	A/R
Step 3: Execution	A/R

2.1. Service Provider/Public Administration

Role: User

Responsibilities:

- Register for the conformance test.
- Prepare their own system for sending or receiving sample eInvoices.
- Execute the tests.

2.2. CEF eInvoicing support

Role: CEF eInvoicing support

Responsibilities:

- Provide assistance to the user when and where required or requested.

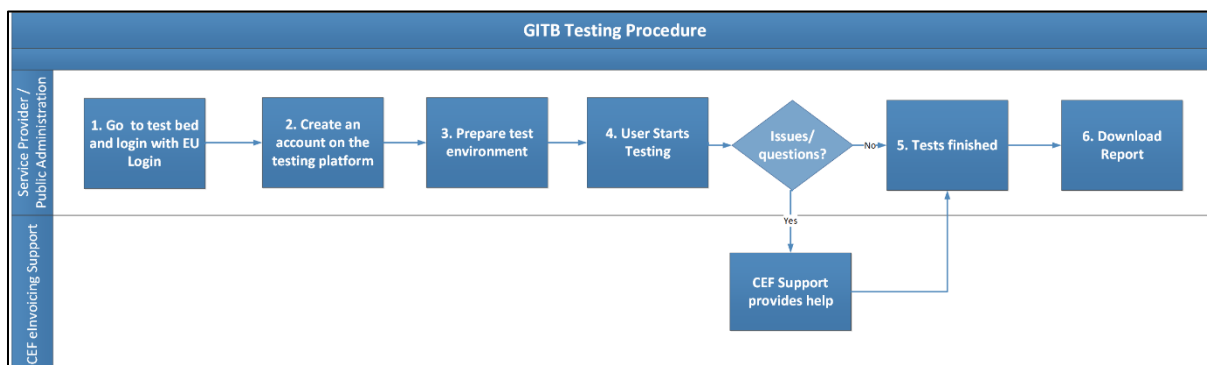

³ RACI: R = Responsible; A = Accountable; C = Consulted, I = Informed.

3. HOW TO USE THE SERVICE STEP BY STEP

This section describes the way the user can apply for the service and the processes that are part of the CEF eInvoicing Conformance Testing service.

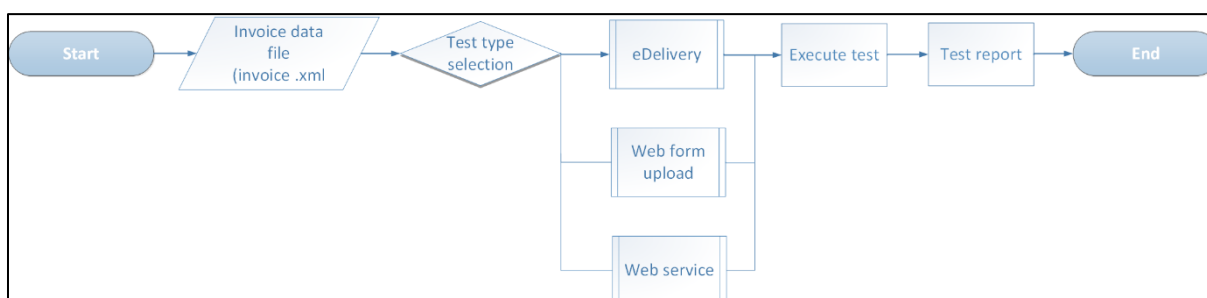

3.1. Processes Overview

The figure below presents the main steps of the CEF eInvoicing Conformance Testing service process. Each process steps is described in more detail in the next sections.

The figure below presents the multiple technical options the user can choose from to apply for conformance testing. The sender scenario option starts with a file of an invoice in .xml format (hereafter called invoice.xml) issued by the user's system. Depending on the choice he or she makes, the user will need to perform some steps to execute the conformance test.

These steps are described in the following sections.

Remark:

If the tests are conducted for INEA grants purposes, it is necessary to use only the eDelivery methods (AS2 or AS4) for the test results, as eDelivery testing sessions are saved in the testing portal and can be validated or downloaded at a later stage if needed.

3.1.1. Web form upload (Only for sender scenario)

If the user chooses to apply for the conformance testing service via web form upload, he or she can request validation via uploading the invoice.xml file(s) through

<https://www.itb.ec.europa.eu/invoice/upload>.

This service is provided to all users (anonymous). Once the electronic invoice is uploaded, it is validated and a detailed report is presented to the user, which can be downloaded (in GITB TRL format) and cross-checked against the submitted content.

3.1.2. **Web service (Only for sender scenario)**

If the user chooses to apply for the conformance testing service via web service, he or she can request the validation of an invoice via web service call to a GITB-compliant content validation service. The web service (WSDL) is available at:

<https://www.itb.ec.europa.eu/invoice/api/validation?wsdl>

To facilitate the use of the web service, the user needs to contact the [service desk](#) to obtain the relevant configuration files needed for the SOAP UI test case.

3.1.3. **eDelivery**

The eDelivery option can be AS2 or AS4 and implies that at least one user is registered in the test bed. (see section 3.2.1 - Step 1: Registration).

3.1.3.1. *eDelivery AS2 validation (Only for sender scenario)*

The user can choose to send an eInvoice for conformance testing via *eDelivery AS2*. If the message with the eInvoice arrived successfully and the validation process is completed, the validation report could be checked or downloaded on the TestBed portal (3.2.2.2 - Option 2: AS4 specification is chosen – point 11).

A test scenario can be executed (acting as sender) after the user logs into the test bed at

<https://www.itb.ec.europa.eu/cef/itb/#/login> using his/her assigned credentials.

3.1.3.2. *eDelivery AS4 validation (For both sender and receiver scenarios)*

- The user can choose to **send** an eInvoice for conformance testing via *eDelivery AS4*. If the message arrived successfully and the validation process is completed, the validation report could be checked or downloaded on the TestBed portal.
- The user can also choose to **receive** an eInvoice for conformance testing via *eDelivery AS4*. The testing platform will then send an eInvoice to the user's AS4 gateway. In case the user needs a confirmation of the successful receiver scenario for INEA grants, he is in charge of uploading the relevant pieces of evidence in the TestBed platform.

A test scenario can be executed after the user logs into the test bed at

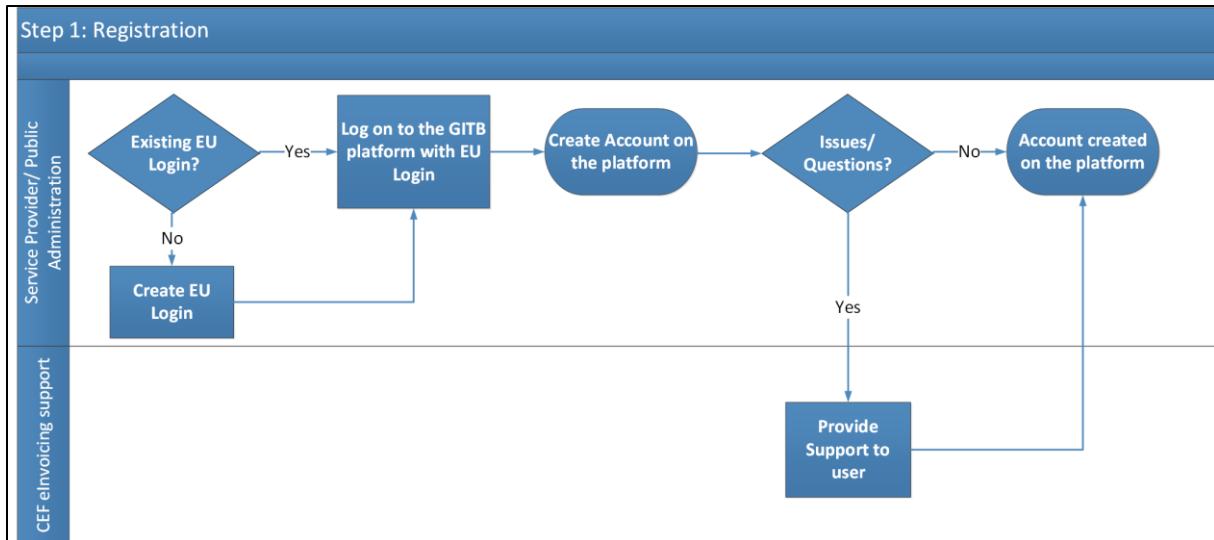

<https://www.itb.ec.europa.eu/cef/itb/#/login> using his/her assigned credentials.

3.2. Processes' steps for eDelivery (AS2/AS4) methods

3.2.1. Step 1: Registration

Purpose: register user account and Organisations/systems on the Test Platform. This registration is only required when applying for the conformance testing service via [eDelivery](#) (AS2/AS4) protocol.

The overview of the registration process is shown in the diagram below:

Actors:

- Service Provider/Public Administration

Process:

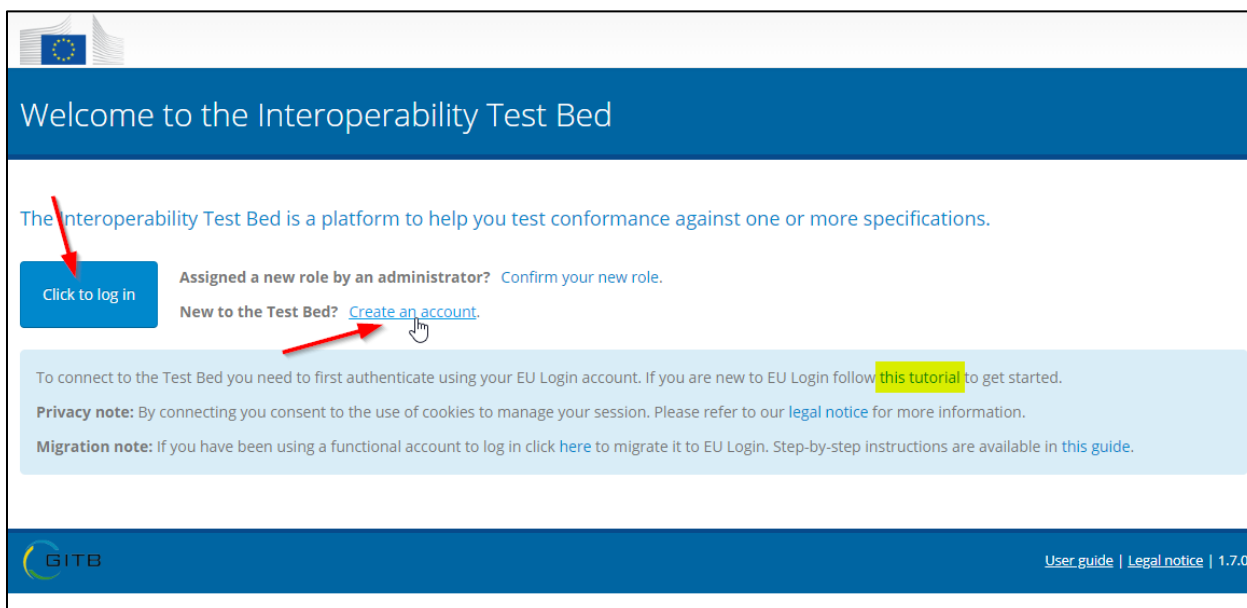

1. Open the Test Bed Welcome page

<https://www.itb.ec.europa.eu/cef/itb/#/login>

2. Login

In order to be able to create an account on the GITB Test Bed, you have to have an EU login account. If you don't have an EU login account, you can create one on the EU login page. If you need more help regarding EU login, you can use the link to the EU Login tutorial on the Test Bed Welcome page.

- 2.1. If you don't have a Test Bed account, click on the **Create an account** button, otherwise click on the **Click to log in** button:

2.2. Provide your EU Login account credentials or create your EU login account:

EU Login
One account, many EU services

Where is ECAS? English (en)

ISA2_ITB requires you to authenticate

Sign in to continue

Use your e-mail address

Next

[Create an account](#)

Or

Or use the eID of your country

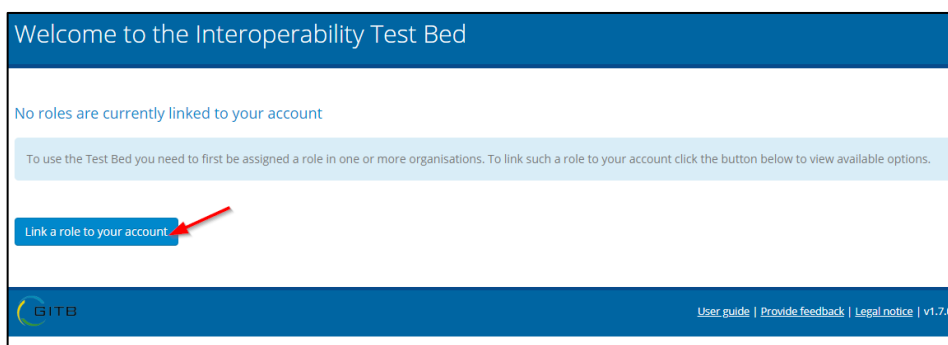

Select your country

Easy, fast and secure: download the EU Login app

Download on the App Store | GET IT ON Google Play | Get it from Microsoft

3. Choose role/Create Organisation

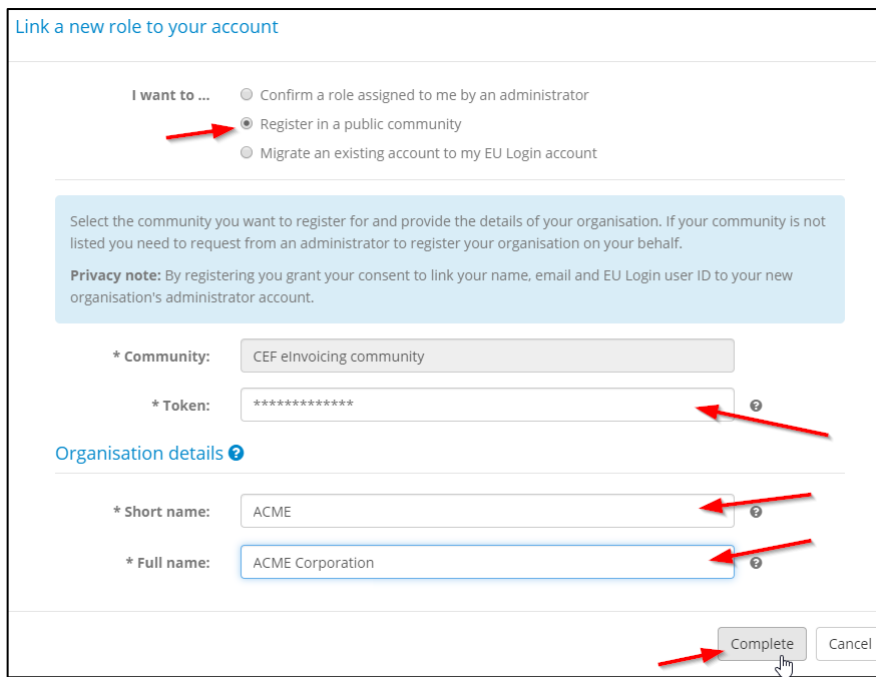

- 3.1. If you are already logged in but don't have any assigned role or registered Organisation, click on the **Link a role to your account** button:

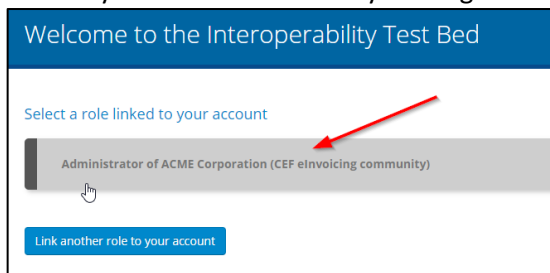

- 3.2. Choose the option **Register in a public community**
- 3.3. Provide the **Token** for joining the **CEF eInvoicing community**
(token: *cefeinvoicing*)

3.4. Start to register your Organisation by filling the short and full name.

3.5. Click on **Complete**:

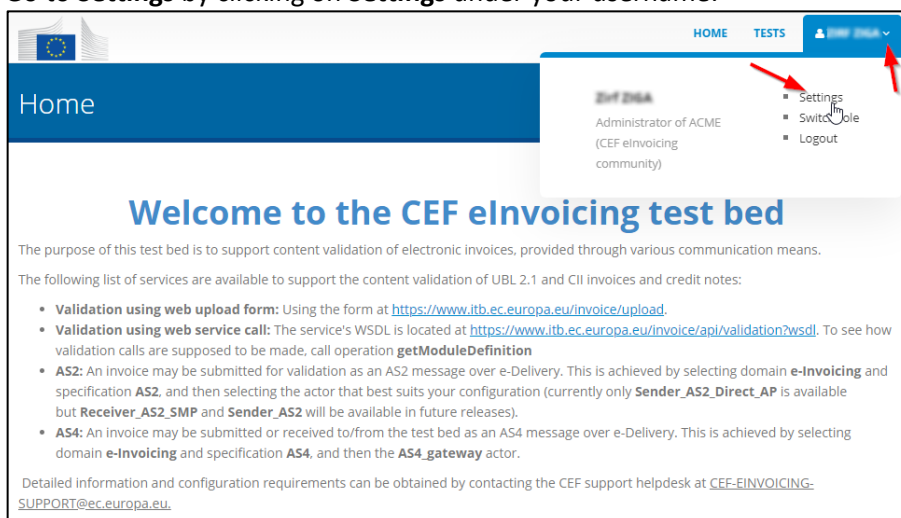

3.6. Choose your new linked role by clicking on it

This completes the login process, and makes you enter to the system as Organisation Administrator.

4. Fill in the required Organisation data

4.1. Go to **Settings** by clicking on **Settings** under your username:

4.2. Go to Organisation by clicking on **Organisation** in the Navigation menu:

4.3. Check the **Show properties** box:

4.4. Fill the required **Additional properties**:

- **Access Point (gateway) implementation:** the AS4 software implementation and version you use;
Remark: This is a mandatory parameter, the test will not start if you do not fill in the information
- **INEA Action Number:** if your tests are initiated under an INEA action, this field is **mandatory** and should be filled with the INEA action number;
- Click on **Save changes**.

3.2.2. Step 2: Preparation

Purpose: Preparation of the test scenario on the TestBed.

Actors:

- Service Provider/Public Administration

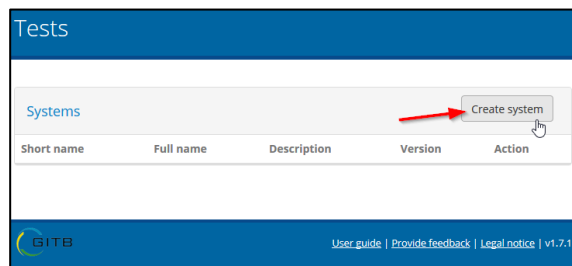

Process:

1. Log on to the GITB platform on <https://www.itb.ec.europa.eu/cef/itb/#/login> with your EU login account.
For more information about EU Login, check §3.2.1 - Step 1: Registration.

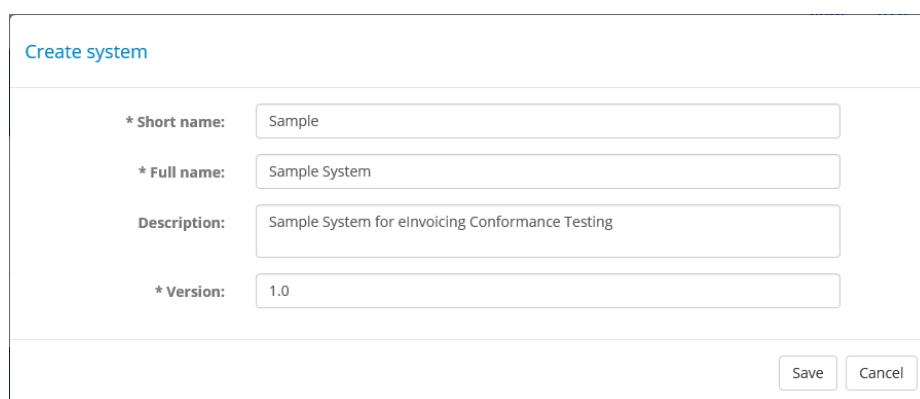

2. Click on the **TESTS** button on the menu bar:

3. Click on the **Create system** button:

4. Fill in the details of the new system information and click on **Save**:

A screenshot of the 'Create system' form in the GITB platform. The form has a title 'Create system' and four input fields with labels: '* Short name:', '* Full name:', 'Description:', and '* Version:'. The fields contain the following sample data: 'Sample', 'Sample System', 'Sample System for eInvoicing Conformance Testing', and '1.0'. At the bottom right of the form are two buttons: 'Save' and 'Cancel'.

5. Click on the newly created system:

Tests

Systems

Create system

Short name	Full name	Description	Version	Action
Sample	Sample System	Sample System for eInvoicing Conformance Testing	1.0	

6. Click on the **Create conformance statement** button:

Conformance statements

Create conformance statement

No conformance statement is present for the system...

7. There are 2 available specifications to choose from: **AS2** and **AS4**.
Click on the required one and click on **Next**:

Create conformance statement

Select specification

Short name	Full name	Description
AS2	AS2	Exchange of UBL 2.1 and CII invoices as AS2 messages.
AS4	AS4	Exchange of UBL 2.1 and CII invoices as AS4 messages.

Cancel

Next

3.2.2.1. Option 1: AS2 specification is chosen

1. Click on **Confirm** on the Summary screen:

Create conformance statement

Summary

Domain	Electronic invoicing The exchange of electronic invoices using the Universal Business Language (UBL) 2.1 and Cross Industry Invoice (CII) syntaxes.
Specification	AS2 Exchange of UBL 2.1 and CII invoices as AS2 messages.
Actor	Sender Access Point Access point sending an invoice as an AS2 message directly to a receiver access point.

CancelConfirm

2. The test is now ready to be configured, click on the conformance statement created:

Conformance statements				Create conformance statement
Domain	Specification	Actor	Results	
Electronic invoicing	AS2	Sender Access Point	0 of 1 passed (1 undefined)	

3. Expand the configuration parameters with the  button, and set the following parameters: **network.host**, **public.key** and **network.port**, by clicking on each  (edit) button, one by one:

Configuration parameters

Endpoint as2

Description

Set?	Parameter	Configured value	Description	Action
*	network.host		The public IP address of the system under test. Incoming connections from any other address will be ignored.	
*	public.key		The public key of the system under test. This is used to verify the message signature.	
*	network.port		The port from which the system under test is expected to connect from. Provide any numeric value as this is currently ignored.	

4. Add into the **network.host** parameter, the public IP or domain address of the sending Access point and click on **Save**.

Remark: *This is a mandatory parameter, the test will not start if you do not fill in the information*

Incoming connections from any other address will be ignored.

The screenshot shows a web form titled "Edit parameter". It contains the following fields: "Name" with the value "network.host", "Description" with the text "The public IP address of the system under test. Incoming connections from any other address will be ignored.", and "* Value" with the text "http://myaccesspoint.AS2.acme.com/". At the bottom right, there are three buttons: "Save", "Delete", and "Cancel".

5. Upload the Sending Access Point **public.key** and click on **Save**.

Remarks:

- *This is a mandatory parameter, the test will not start if you do not fill in the information*
- *This is used to verify the message signature.*

The screenshot shows a web form titled "Edit parameter". It contains the following fields: "Name" with the value "public.key", "Description" with the text "The public key of the system under test. This is used to verify the message signature.", and "* Value" with an "Upload" button. At the bottom right, there are three buttons: "Save", "Delete", and "Cancel".

6. Input a port number into the **network.port** and click on **Save**.

Remark: *do not forget to fill the **Value** field as it is a mandatory (*) field. However, as it is currently not used in the TestBed, you can enter any numeric value.*

The screenshot shows a web form titled "Edit parameter". It contains the following fields: "Name" with the value "network.port", "Description" with the text "The port from which the system under test is expected to connect from. Provide any numeric value as this is currently ignored.", and "* Value" with the value "1234". At the bottom right, there are three buttons: "Save", "Delete", and "Cancel".

7. Download the configuration package

You have now completed the preparation step and you can continue with the execution as described in §3.2.3 - Step 3: Execution & report feedback.

3.2.2.2. Option 2: AS4 specification is chosen

1. Choose the **actor** for your required scenario and press **Next**
 - SENDER scenario> **AS4_sender**
In this case, your access point sends messages to the TestBed with the eInvoices you want to test regarding compliances.
 - RECEIVER scenario> **AS4_receiver**
In this case, the TestBed sends messages to your access point with sample eInvoices, so that you can test the receiving and processing of compliant eInvoices in your eInvoicing system.

The screenshot shows a web interface titled "Create conformance statement". Under the heading "Select actor", there is a table with three columns: "ID", "Name", and "Description". The table contains two rows: "AS4_receiver" (AS4 receiver, Access point receiving invoices as AS4 messages.) and "AS4_sender" (AS4 sender, Access point sending invoices as AS4 messages.). The "AS4_sender" row is highlighted in blue. At the bottom of the dialog, there are "Cancel" and "Next" buttons. A mouse cursor is pointing at the "Next" button.

ID	Name	Description
AS4_receiver	AS4 receiver	Access point receiving invoices as AS4 messages.
AS4_sender	AS4 sender	Access point sending invoices as AS4 messages.

2. Click on **Confirm** on the Summary screen:

The screenshot shows the "Summary" screen of the "Create conformance statement" dialog. It displays the following information:

- Domain:** Electronic invoicing (Development)
The exchange of electronic invoices using the Universal Business Language (UBL) 2.1 and Cross Industry Invoice (CII) syntaxes.
- Specification:** AS4
Exchange of UBL 2.1 and CII invoices as AS4 messages.
- Actor:** AS4 sender
Access point sending invoices as AS4 messages.

At the bottom, there are "Cancel" and "Confirm" buttons. A red arrow points to the "Confirm" button, which has a mouse cursor over it.

3. The test is now ready to be configured, click on the conformance statement created:

Conformance statements				Create conformance statement
Domain	Specification	Actor	Results	
Electronic invoicing (Development)	AS4	AS4 sender	0 of 1 passed (1 undefined)	

4. Expand the Configuration parameters with the  button:

Test status
0 of 9 passed (9 undefined)

Download report
Delete statement

Configuration parameters

Conformance tests

Test case	Description	Result
-----------	-------------	--------

and set the **accessPointUrl** parameter by clicking on the  (edit) button:

Configuration parameters

Endpoint as4info

Description Configuration parameters for your AS4 access point.

Set?	Parameter	Configured value	Description	Action
✗	* accessPointUrl		The URL of your access point.	
✗	* configBundle		The configuration bundle to set up your access point (set by the administrator).	
✗	* consideredAccessPointUrl		The access point URL that corresponds to the	

5. Input your Access Point public URL into **accessPointUrl** and click on **Save**:

Remark: This is a mandatory parameter, the test will not start if you do not fill in the information.

Edit parameter

Name:
accessPointUrl

Description:
The URL of your access point.

* Value:

Save

Delete

Cancel

6. Download your configuration package.

If you saved your valid **accessPointUrl** parameter, the TestBed generates a Party ID and a configuration package for you.

Refresh the Tests page and expand the **Configuration parameters** until you find the downloadable package in the **configBundle** parameter, then click on it for downloading.

Configuration parameters				
Endpoint	as4Info			
Description	Configuration parameters for your AS4 access point.			
Set?	Parameter	Configured value	Description	Action
✓	* accessPointUrl	http://as4.acme.com:8080 /domibus/msh	The URL of your access point.	
✓	* configBundle	configBundle.zip	The configuration bundle to set up your access point (set by the administrator).	
✓	* consideredAccessPointUrl	http://as4.acme.com:8080 /domibus/msh	The access point URL that corresponds to the configBundle (set by the administrator).	
✗	evidence		Evidence (e.g. screenshots) from your invoicing system about the successfully processed sample invoices sent by the TestBed. (Not about the receiving, but the processing!)	
✓	* partyId	invoicing_71	The party ID of your access point that will be receiving invoices (set by the administrator).	

You have now completed the preparation step and can continue with the execution as described in [§3.2.3- Step 3: Execution & report feedback](#).

When needing assistance in preparing your test set up, feel free to contact the CEF eInvoicing support team (CEF-EINVOICING-SUPPORT@ec.europa.eu). For contact information see also [§6 - Contact Information](#).

3.2.3. Step 3: Execution & report feedback

Purpose: execute the conformance tests and generate a test report.

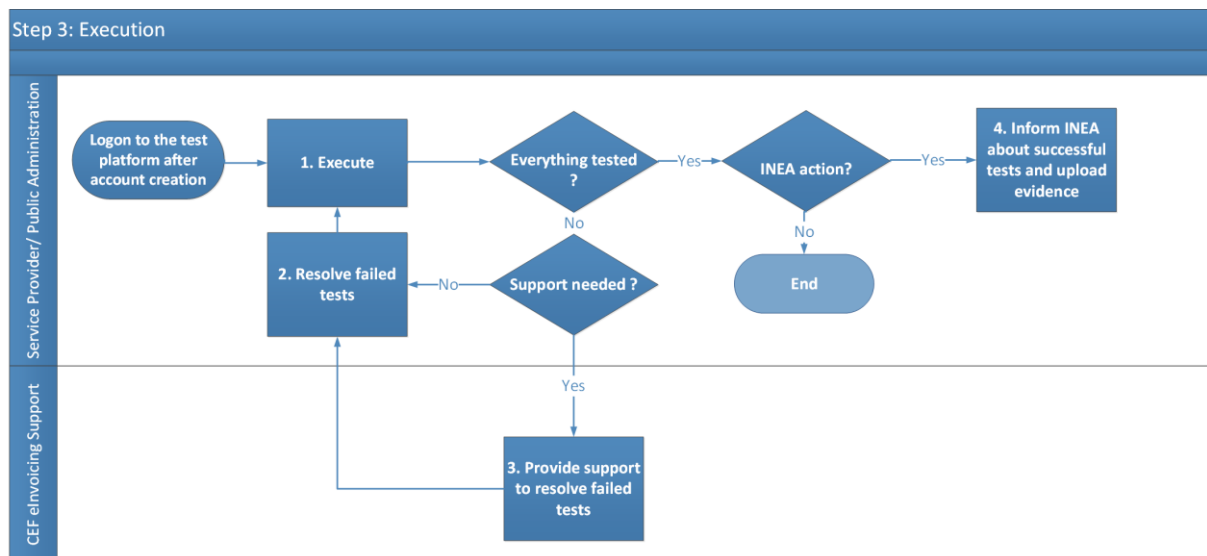

Actors

- Service Provider/Public Administration

Process:

1. The Service Provider/Public Administration executes the conformance tests using the testing platform.
2. The Service Provider/Public Administration resolves the failed tests (with or without the support of the CEF eInvoicing support).
3. The CEF eInvoicing support provides technical support to the Service Provider/Public Administration during the execution of the conformance tests.
4. If the test was performed under an INEA action, the Service Provider/ Public Administration informs INEA, once all conformance tests have successfully passed and the required evidence was uploaded.

The overview of the Execution process is shown in the diagram below:

3.2.3.1. AS2

The user can validate an eInvoice once the registration and the preparation on the GITB platform is completed as described in the preparation section and once the user has configured his Access Point and eInvoicing system. To do so the user should download the configuration package, containing the gitb-engine public certificate which is needed for the configuration on his side (3.2.2.1 - Option 1: AS2 specification is chosen - Step 7.)

1. Log on to the GITB platform at <https://www.itb.ec.europa.eu/cef/itb/#/login> with your EU login account.
For more information about EU Login, check §3.2.1 - Step 1: Registration.
2. Select the required role (organisation) linked to your account.
3. Click on **TESTS** button.
4. Select the System created in the preparation phase.

5. Select the Conformance statement created in the preparation phase.
6. Verify that the Configuration parameters were set correctly as described in the preparation phase (**network.host**, **network.port**, **public.key**).
7. Open the only available Test Case **AS2_direct_ap** by clicking on the **Play** button:

Conformance tests		
Test case	Description	Result
AS2_direct_ap	Send an invoice as an AS2 message directly to a receiver access point (no SML or SMP involved).	UNDEFINED

Remark: If any mandatory parameter is missing for the test, you will get a list of missing parameters in the next screen instead of the screen below. Please fill them properly before continuing with the further steps.

On the Test execution page, you can find the required data you need for configuring your AS2 access point. Please note the **network.host** and **network.port** of the TestBed (Receiver) Access Point: you will need them to configure your (Sender) Access Point:

Test cases to execute

Next

Name	Description	Status
AS2_direct_ap	Send an invoice as an AS2 message directly to a receiver access point (no SML or SMP involved).	

Test [AS2_direct_ap] - Preliminary phase

Simulated configurations for Sender_AS2_Direct_AP

- Receiver_AS2
 - network.host: einoicing.westeurope.cloudapp.azure.com
 - network.port: 8081

10. If any of the phases is marked with a red cross, this means it was unsuccessful. Click on the document with the red **x** to get detailed information on the error.
11. If all phases are finished successfully, you can check or download your successful reports of the performed tests. Navigate back and open the **Performed Tests** page, where you will find all your test results. If the test was performed under an INEA action, you should inform INEA about the successful results, then they will check and validate the attempts on the TestBed.

3.2.3.2. AS4

The user can validate an eInvoice once the registration and the preparation on the GITB platform is completed as described in the relevant preparation section and once the user has configured his Access Point and eInvoicing system. To do so the user shall download and use the configuration package that contains the required files (manual, sample soap project, a private key, a Pmode and a Truststore). The package can be downloaded from the configBundle parameter (see configuration section at: 3.2.2.2 - Option 2: AS4 specification is chosen- *Step 6.*), which needs to be adapted to the user's environment. Non-Domibus users should use the Pmode as a guideline for setting up their environment.

1. Log on to the GITB platform at <https://www.itb.ec.europa.eu/cef/itb/#/login> with your EU login account.
For more information about EU Login, check §3.2.1 - Step 1: Registration.
2. Select the required role (organisation) linked to your account.
3. Click on **TESTS** button.
4. Select the System created in the preparation phase.
5. Select the Conformance statement created in the preparation phase.
6. Verify that the Configuration parameter was set correctly as described in the preparation phase (**accessPointUrl**) and that all the other mandatory parameters were generated successfully by the TestBed (configBundle, consideredAccessPointUrl, partyId).

The next steps are depending on the chosen scenario of the Conformance statement:

- **Sender scenario was chosen:**

You are the **sender** party and will send an AS4 message with the elInvoice intended to be tested to the GITB TestBed which is the receiver.

1. Choose the only available TestCase (**AS4_send**) and open it by clicking on the **Play** button:

Conformance tests		
Test case	Description	Result
AS4_send	Send an invoice or credit note as an AS4 message.	UNDEFINED

Remark: If any mandatory parameter is missing for the test, you will get a list of missing parameters in the next screen instead of the screen below. Please fill them properly before continuing with the further steps.

On the **Test execution** page, you can find the required data you need for configuring your AS4 access point. Please note the **as4.gateway.url** of the TestBed (Receiver) Access Point. Select this when using the PMode of your (Sender) Access Point.

Test execution

Test cases to execute
Next

Name	Description	Status
AS4_send	Send an invoice or credit note as an AS4 message.	

Test [AS4_send] - Preliminary phase

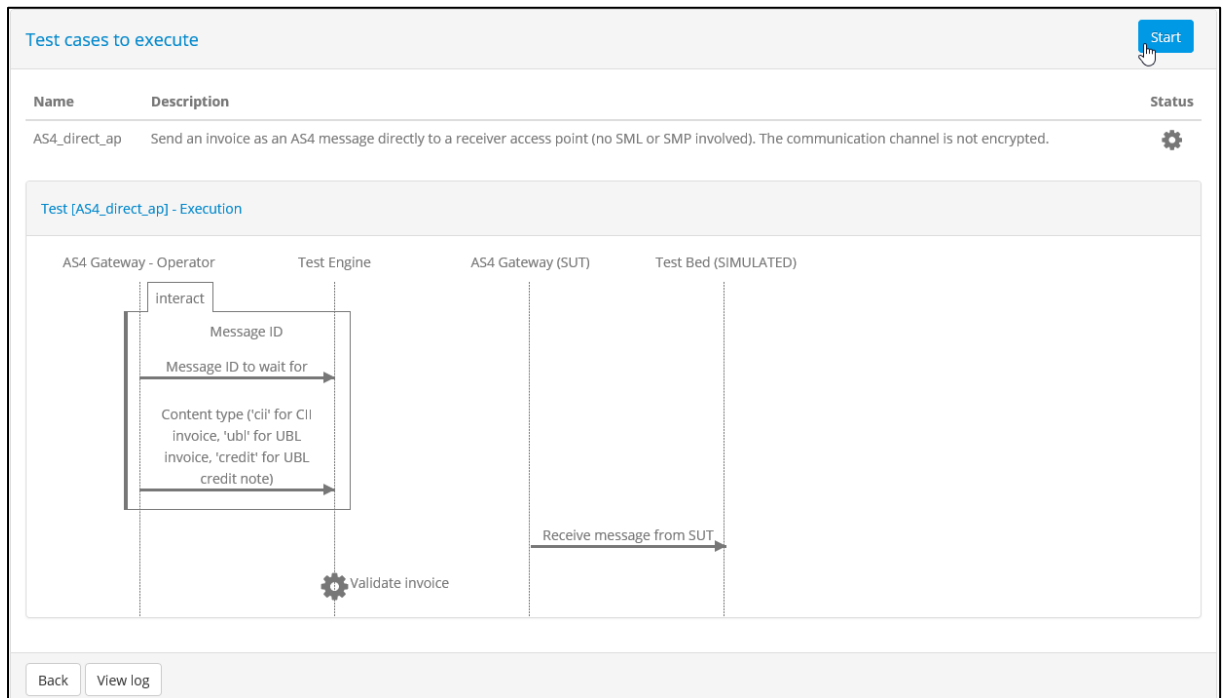

Simulated configurations for AS4 sender

- AS4 receiver
 - as4.gateway.url: https://www.itb.ec.europa.eu/cef/domibus/services/msh

Back View log

- Update if needed and install the Pmode downloaded in the configuration package, at preparation phase on your (Sender) Access Point.
- Install the Truststore downloaded in the configuration package, on your (Sender) Access Point: by default, the Truststore password is set to "test123".
- Install the Keystore downloaded in the configuration package, on your (Sender) Access Point: by default, the Keystore password is set to "test123".

- Click on the **Next** button to complete and click on the **Start** button to start the test:

- Once the process starts, the **Server interaction** screen will be displayed awaiting for input:

The screenshot shows a web form titled "Server interaction". It contains two input fields and a "Send" button:

- Message ID to wait for**: A text input field.
- Content type ('cii' for CII invoice, 'ubl' for UBL invoice, 'credit' for UBL credit note)**: A text input field.
- Send**: A button to submit the form.

- At this point you can start your Access Point and send an AS4 message to the TestBed with the invoice that you want to have tested be tested in the attachment. If needed, you can use the SOAPUI project provided by the CEF Support as a template.
- Write down the resulting **messageID**.

- Input the messageID in the Gitb **Server interaction** screen, together with the chosen elnvoice format (**cii** or **ubl**) and click on **Send** to execute:

Server interaction

Message ID to wait for

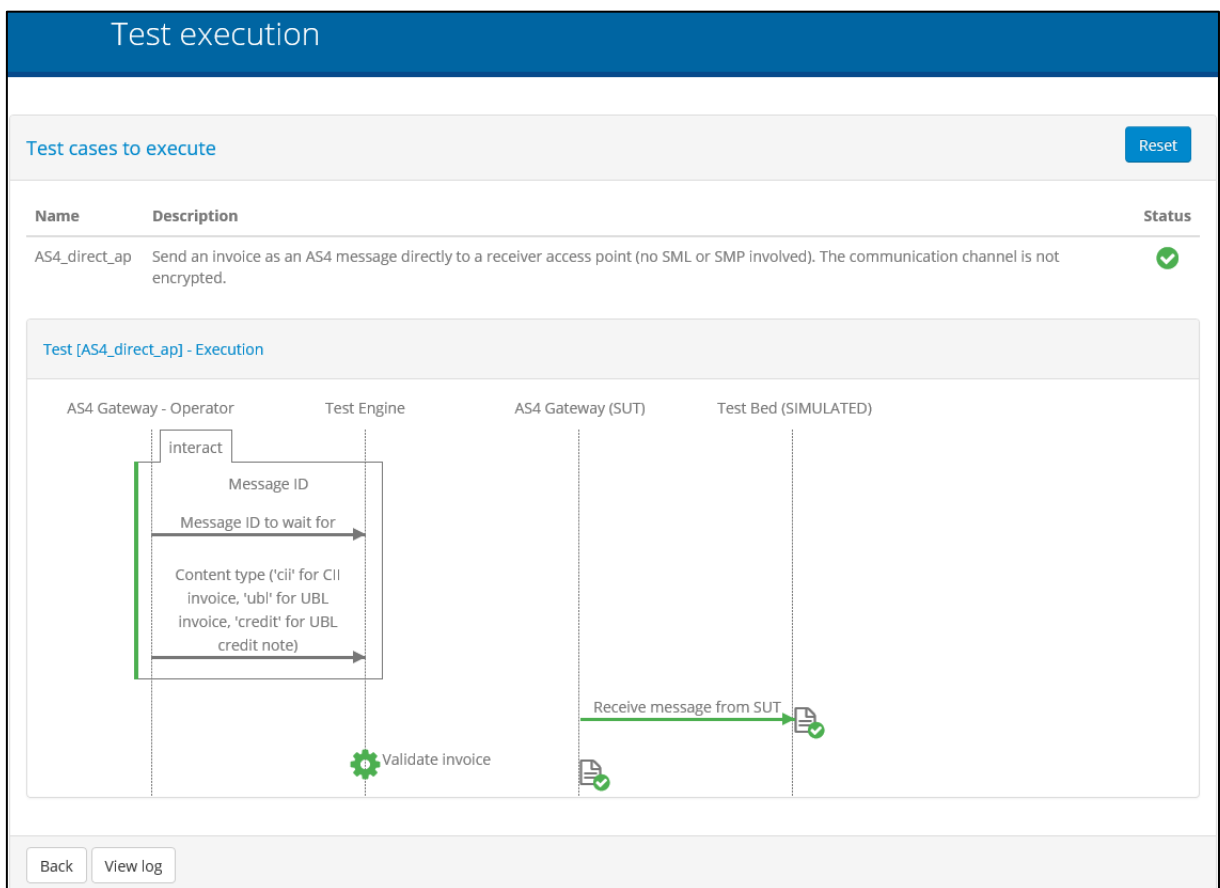

e310fabd-2cba-4ffe-808a-655de1ad79cd@domibus.eu

Content type ('cii' for CII invoice, 'ubl' for UBL invoice, 'credit' for UBL credit note)

ubl

Send

- The test status will then be displayed. If all phases were successful they will be displayed in **green** as shown in this successful test example below:

- If any of the phases is marked with a red cross, this means it was unsuccessful. Click on the document with the red **x** to get detailed information on the error.
- If all phases are finished successfully, you can check or download your successful report of the performed test. Navigate back and open the **Performed Tests page**, where you will find all your test results. If the test was performed under an INEA action, you should inform INEA about the successful results.

- **Receiver scenario was chosen:**

You are the **receiver** party and will receive an AS4 message with a sample compliant eInvoice, from the GITB TestBed who is the sender.

1. There are multiple sample eInvoices in the GITB TestBed repository. You can select any of them according to your need or your invoicing system requirements.

Choose any of the available Receiver test cases and open it by clicking on the **Play** button:

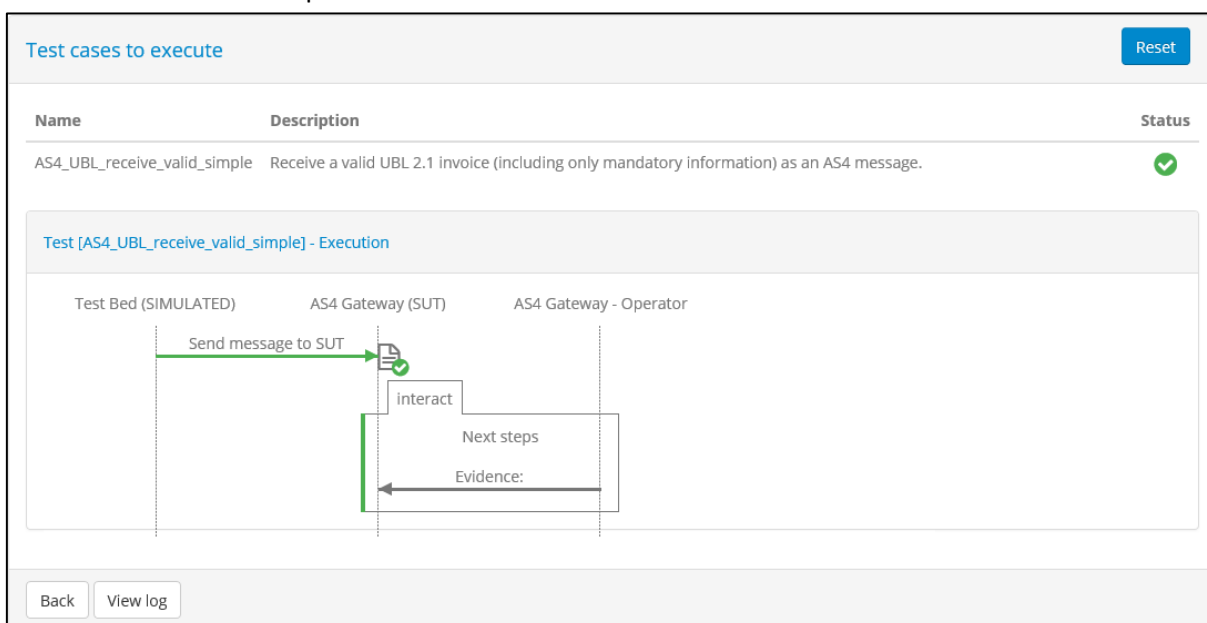

Remark: For INEA grants purposes, it is sufficient to fulfil one of the Test case.

Conformance tests			
Test case	Description	Result	
AS4_UBL_receive_valid_simple	Receive a valid UBL 2.1 invoice (including only mandatory information) as an AS4 message.	UNDEFINED	
AS4_UBL_receive_valid_simple_vat	Receive a valid UBL 2.1 VAT invoice (including only mandatory information) as an AS4 message.	UNDEFINED	
AS4_UBL_receive_valid_complete	Receive a valid UBL 2.1 invoice (including mandatory and	UNDEFINED	

Remark: If any mandatory parameter is missing for the test, you will get a list of missing parameters in the next screen instead of the screen below. Please fill them properly before continuing with the further steps.

Click on the **Next** button to complete and click on the **Start** button to start the test. The TestBed then sends the chosen sample eInvoice in an AS4 message to your Access Point.

2. If the message was received successfully, it will be displayed in **green** as shown in the successful test example below:

3. If any of the phases are marked red, it means that it was unsuccessful. Click on the document with the red **x** to get detailed information on the error.

4. After successfully completing one of the receiving test scenario's, you can check or download your successful report of the performed test. Navigate back and open the **Performed Tests page**, where you will find all your test results.
5. If the test was performed under an INEA action, you should inform INEA about the successful results.

Note that INEA will also request your test evidence on the processing of the received sample invoice to mark the receiver action as successfully completed. This test evidence can consist out of screenshots from your eInvoicing system, where the sent sample eInvoices is successfully processed and where it's possible to identify the sample eInvoices on the picture.

The evidence files should be uploaded into the **evidence** parameter at the Configuration parameters section on the Tests page (see configuration section 3.2.2.2 - Option 2: AS4 specification is chosen). If you want to provide more than one file, you can put all your files together in a zip file.

4. TERMS AND CONDITIONS

The general terms and conditions of CEF Building Blocks can be consulted in the Master Service Arrangement, available on the CEF Digital Single Web Portal:

<https://ec.europa.eu/cefdigital/wiki/x/DAiZAQ>

The terms and conditions specific to the CEF eInvoicing Conformance Testing service are described in the table below:

Term/Condition	Description
Obligations of the Client	<p>It is the responsibility of the Client to :</p> <ul style="list-style-type: none">a) ensure that sufficient information and documents are provided in due time to enable the required services to be performed;b) Fulfil the conformance requirements, including implementing appropriate changes when they are communicated by the European Commission.
Delivery of the services	<p>The European Commission will provide the conformance testing services using reasonable care and skill and in accordance with the technical specifications and procedures outlined in this document.</p> <p>The timing of completion of the conformance testing services and the delivery of the test results is based on best effort.</p>
Warranty disclaimer	<p>The conformance testing services and the results thereof are provided on the basis of the information, documents and implementations supplied by the Client. The test report issued by the European Commission is issued on an AS-IS basis and will reflect the facts as recorded at the time of testing.</p> <p>The European Commission is under no obligation to refer to, or report upon, any facts or circumstances which are outside the scope of this service and the procedures outlined in this document.</p>
Limitation of liability	<p>In no event shall the European Commission be liable to the Client or anyone claiming through the Client, for any kind of damages resulting from reliance on the test results.</p>

Term/Condition	Description
Proof of Conformance	<p>If the product/implementation passes all mandatory test assertions, the Client will receive a Proof of Conformance in the form of a test report. It should be clear that this test report has no legal value. It is a technical report, outlining the test results based on the version of the testing platform and test cases in effect at the time of testing.</p> <p>The Proof of Conformance (test report) is restricted only to the product-with version that was subject to testing for a specific test run at a specific date. Other products offered by the Client or versions of that product which have not undergone testing are not considered to be conformant.</p>
Disclosure	<p>The Client is entitled to disclose the fact that the product/implementation passed the conformance test to third parties. Notwithstanding the following conditions:</p> <ul style="list-style-type: none"> a) there should be clear mention of the product-with version to which the Proof of Conformance applies, labelled with the specific test run and date; b) the test reports can only be reproduced in their entirety, if provided by the Client to third parties; c) the test report should not be used in such a manner as to bring the European Commission into disrepute and not make any statement regarding its Proof of Conformance that the European Commission may consider misleading or unauthorized;

5. GLOSSARY

The key terms used in this Component Offering Description are defined in the CEF Definitions section on the CEF Digital Single Web Portal:

<https://ec.europa.eu/cefdigital/wiki/display/CEFDIGITAL/CEF+Definitions>

The key acronyms used in this Component Offering Description are defined in the CEF Glossary on the CEF Digital Single Web Portal:
